

## Post Surgical Instructions Curretage & Electrodessication (ED&C)

- 1. Expect the anesthetic to remain effective for 1-3 hours after the procedure.
- 2. Mild pain or discomfort may develop. This discomfort can usually be controlled with Tylenol and by applying an ice pack for 10-15 minutes every 2 hours.
- 3. Keep the bandage in place, dry and clean for 48 hours.
- 4. After removing the dressing, gently clean the area with warm soapy water. Do not use alcohol, hydrogen peroxide or other cleaners.
- 5. If a small amount of bleeding develops, apply pressure for 10 minutes and set a timer. NO peeking at the wound for at least 10 minutes.
- 6. Re Apply enough Vaseline or antibiotic ointment to adequately cover the wound and completely cover it with a clean, dry bandage. It is important to keep the wound moist. A dry scab slows down the healing process and contributes to a more noticeable scar.
- 7. Repeat the cleaning and dressing daily.
- 8. It is normal to have a small amount of redness, tenderness, swelling, drainage or oozing.
- 9. If the area becomes hot, excessively tender, red or swollen or drains pus, the wound may be getting infected. Call the office at (972) 283-8979 as soon as possible.
- 10. It typically takes 4-6 weeks for the wound to heal, depending on the size and location of the wound. The scar may remain pink for several months after the skin has healed.
- 11. Feel free to call the office if you have any concerns about the procedure, the healing process, or if you think something may be wrong.
